

Motion sickness

Motion sickness is feeling sick when travelling by car, boat, plane or train. You can do things to prevent it or relieve the symptoms.

Easing motion sickness

Do

- Reduce motion – sit in the front of a car or the middle of a boat
- Look straight ahead at a fixed point, such as the horizon
- Breathe fresh air if possible – for example, by opening a car window
- Close your eyes and breathe slowly while focusing on your breathing
- Distract children by talking, listening to music or singing songs

Don't

- Do not read, watch films, or use electronic devices
- Do not look at moving objects, such as passing cars or rolling waves
- Do not eat heavy meals, spicy foods or drink alcohol before or during travel

Causes of motion sickness

The cause of motion sickness is repeated movements when travelling. For example, going over bumps in a car or moving up and down in a boat.

The inner ear sends different signals to your brain from those your eyes are seeing. The confusing messages cause you to feel unwell.

A pharmacist can help with motion sickness

- Tablets – dissolvable tablets are available for children
- Patches – can be used by adults and children over 10
- Acupressure bands – these do not work for everyone
